                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence represents a genomic DNA which encodes the human caspase crecruitment domain 12 (CARD-12) polypeptide. CARD domains are found in a number of proteins that transmit signals that activate apoptosis and contains and inflammatory pathways in response to stress and other stimuli. Therefore, CCARD-12 and its corresponding nucleic acid may be used in treatment and cdiagnosis of patients suffering from disorders associated with an CC abnormal level (an increase or a decrease) of apoptotic cell death or abnormal activity of stress-related pathways. The disorders include cancer, viral infections (e.g. caused by poxviruses, adenoviruses), CC autoimmune disorders (e.g. Alzheimer's disease, amyotrophic lateral colorosis), haematologic diseases (e.g. aplastic anaemia, myocardial colorosis), haematologic diseases (e.g. aplastic anaemia, myocardial colorosis, graft rejection), bacterial infections (e.g. tuberculosis, lepromatous laprosy), ischaemic and hypoxic brain injury, kidney capalities and liver disease, accite bacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure; Fig

They may also be used as vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US-09-697-089-2 (1-1024) x AAH78218

```
AAH99166 to AAH99904 encode the human proteins given in AAM2525 to Cells they are proteins can have activities based on the tissues and CC cells they are expressed in, such as: antiinflammatory; antirheumatic; cardiant; cc antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant; cc cardiovascular; antianemnic; antiaggregant; haemostatic; vulnerary; cc antiulcer; osteopathic; dermatological; antiallergic; antiasthmatic; cr antidabetic; cytostatic; neuroprotective; antidepressant; nootropic; cc antidabetic; cytostatic; neuroprotective; antidepressant; nootropic; cr antiparkinsonian; and immunostimulant. The proteins and polynucleotides encoding them can be used in gene therapy antisense therapy and vaccine cc production. The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders, cancemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, csteoporosis, severe combined immunodeficiency, eczema, allergic cr rhinitis, asthma, diabetes, cancer, multiple sclerosis, depression, altoriars disease, Parkinson's disease, neurodegenerative and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC containing the vector (e.g. bacteria, yeast, plant, animal, mammalian CC and insect cells) and an anti-CARD antibody. The CARD-containing CC polypeptide and CARD-encoding nucleic acid are useful for treating a CC pathology characterised by abnormal cell proliferation (e.g. cancer), CC abnormal cell death (apoptosis), autoimmune diseases or inflammation. In CC particular, the polypeptide and nucleic acid are useful for treating content of the polypeptide and nucleic acid are useful for treating content of the polypeptide and nucleic acid are useful for treating content of the polypeptide and nucleic acid are useful for treating content of the polypeptide and nucleic acid are useful for treating content of the polypeptide and nucleic acids, smooth content of the polypeptide and nucleic acids, smooth content of the proliferation in arteries following balloon angioplasty content of the proliferation, and the proliferation and the proliferation and the proliferation, heart failure, content of the proliferation as a content of the proliferation are useful content of the proliferations. The present sequence is a content of the proliferation and protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New caspase recruitment domain (CARD)-containing polypeptides and encoding nucleic acids, useful for treating abnormal cell proliferation or cell death, autoimmune diseases or inflammation, e.g. carcinomas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated caspase recruitment domai containing polypeptide, or a CARD, NB-ARC, ANGIO-R, LRR or SA from it, and the polynucleotides encoding them. Also included recombinant vector comprising the polynucleotide, recombinant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 891

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US-09-697-089-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Crecombinant vector comprising the polynucleotide, recombinant cells containing the vector (e.g. bacteria, yeast, plant, animal, mammalian Candinsect cells) and an anti-CARD antibody. The CARD-containing Cpolypeptide and CARD-encoding nucleic acid are useful for treating a Cpolypeptide and CARD-encoding nucleic acid are useful for treating a Cpathology characterised by abnormal cell proliferation (e.g. cancer), Cc abnormal cell death (apoptosis), autoimmune diseases or inflammation. In Cparticular, the polypeptide and nucleic acid are useful for treating Cc keratinceyte hyperplasia, inflammatory hyperplasia, fibrosis, smooth Cc muscle cell.proliferation in arteries following balloon angioplasty Cc (restenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias, Cc allergies, arthritis, lupus, Schrogen's syndrome, Crohn's disease, Cc graft-versus-host disease, stroke, myocardial infarction, heart failure, Cc neurodegenerative diseases (e.g. Parkinson's disease or Alzheimer's Cc immunodeficiency virus (HIV) infection). The nucleic acids are useful Cc in a variety of diagnostic applications. The present sequence is a Cc DNA encoding a CARD domain containing protein.

The CARD-containing CC polypeptide and CARD-encoding nucleic acid are useful for treating a CC pathology characterised by abnormal cell proliferation (e.g. cancer), CC abnormal cell death (apoptosis), autoimmune diseases or inflammation. In CC particular, the polypeptide and nucleic acid are useful for treating CC keratincoyte hyperplasia, inflammatory hyperplasia, fibrosis, smooth CC muscle cell proliferation in arteries following balloon angioplasty CC (restenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias, CC (restenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias, CC (allergies, arthritis, lupus, Schrogen's syndrome, Crohn's disease, CC graft-versus-host disease, stroke, myocardial infarction, heart failure, CC (allergies, arthritis, lupus, Schrogen's syndrome, Crohn's disease, CC (allergies, arthritis, lupus, Chromas, Containis, Crohn's disease, CC (allergies, arthritis, lupus, Chromas, CC (allergies, arthritis, lupus, Carcinomas, CC (allergies, arthritis, lupus, Car

diagnosing, used as foo nucleic acid molecules encoding 461 human secreted proteins for gnosing, preventing, treating or ameliorating medical conditions d as food additives or preservatives and

Claim SEQ ID No 339; 980pp; English.

CC The invention relates to isolated nucleic acid molecules and their CC encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, cc prevent, treat or ameliorate a medical condition in e.g. humans, mice, cc rabbits, goats, horses, cats, dogs, chickens or sheep. They cc are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in cc diagnostic immunoassays e.g. radioimmunoassays or enzyme linked include autoimmune diseases e.g. rheumatoid arthritis, cardiovascular disorders e.g. rheumatoid arthritis, cardiovascular disorders e.g. rheumatoid arthritis, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, or and disorders e.g. cardiac arrest pathological fungional conditions caused by bacteria, viruses and funging conditions caused by bacteria, viruses and funging conditions and many other conditions caused by bacteria viruses and funging conditions and many other also be used to aid wound healing and epithelial cell proliferation, to convert skin aging due to sunburn, to maintain organs before converted the condition of primary tissues, to the conditions are considered to the properties, to the conditions are considered to the properties, to the conditions are considered to the properties, to the conditions are conditions and the conditions are conditions and the conditions are conditions. regenerate tissues and in chemotaxis. The polypeptides can also be as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence encodes a novel secreted ng due to sunburn, to maintain organs before for supporting cell culture of primary tissues, to as and in chemotaxis. The polypeptides can also be used protein of the invention.

N and P may be used in the prevention, CC diagnosis and treatment of diseases associated with inappropriate P CC expression. For example, N and P may be used to treat disorders CC in a patient's genome that affect the activity of P by expressing CC inactive proteins or to supplement the patients own production of P. CC Additionally, N may be used to produce the colon cancer-associated Ps, CC inscrive proteins or to supplement the patients own production, diagnosis CC in the proteins. N and P can be used in the prevention, diagnosis CC and treatment of colorectal carcinomas and cancers. AAH37194 to AAH37204 CC and AAB77789 represent sequences used in the exemplification of the CC present invention.

CC N.B. Pages 666 to 682 and page 7053 of the sequence listing were CC missing at time of publication, meaning no sequences are present for CC SEQ ID NO:1027 to 1052, 7921 and 7922.
                                                                                                               2247
                                                                                                                                     1005
                                                                                                                                                               2307
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2727

                                                                                                                                                                                     The invention relates to an isolated caspase recruitment domain (CARD)
C containing polypeptide, or a CARD, NB-ARC, ANGIO-R, LRR or SAM domain
CC from it, and the polynucleotides encoding them. Also included are a
CC recombinant vector comprising the polynucleotide, recombinant cells
CC containing the vector (e.g. bacteria, yeast, plant, animal, mammalian
CC and insect cells) and an anti-CARD antibody. The CARD-containing
CC ophypeptide and CARD-encoding nucleic acid are useful for treating a
CC pathology characterised by abnormal cell proliferation (e.g. cancer),
CC abnormal cell death (apoptosis), autolimune diseases or inflammation. In
CC particular, the polypeptide and nucleic acid are useful for treating
CC (restenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias,
CC (allergies, arthritis, lupus, Schrogen's syndrome, Crohn's disease,
CC allergies, arthritis, lupus, Schrogen's syndrome, Crohn's disease,
CC neurodegenerative disease, stroke, myocardial infarction, heart failure,
CC inmunodeficiency virus (HIV) infection). The nucleic acids are useful
CC in a variety of diagnostic applications. The present sequence is a

           The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked
                                                                                                                                                                                                           New nucleic acid molecules encoding 461\ human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions used as food additives or preservatives -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection, and many other disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence encodes a novel secreted protein of the invention.
              Human cDNA encoding CLAN C

                                                                                                                                                                                                                                         The invention relates to an isolated caspase recruitment domain (CARD) C -containing polypeptide, or a CARD, NB-ARC, ANGIO-R, LIRR or SAM domain CC from it, and the polynucleotides encoding them. Also included are a cC recombinant vector comprising the polynucleotide, recombinant cells C containing the vector (e.g. bacteria, yeast, plant, animal mammalian CC and insect cells) and an anti-CARD antibody. The CARD-containing CC polypeptide and CARD-encoding nucleic acid are useful for treating a CC polypeptide and carbised by abnormal cell proliferation (e.g. cancer), CC abnormal cell death (apoptosis), autoimmune diseases or inflammation. In CC particular, the polypeptide and nucleic acid are useful for treating CC keratinocyte hyperplasia, inflammatory hyperplasia, fibrosis, smooth CC muscle cell proliferation in arteries following balloon angioplasty CC (restenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias, CC allergies, arthritis, lupus, Schrogen's syndrome, Crohn's disease, CC allergies, arthritis, lupus, Schrogen's syndrome, Crohn's disease, CC disease) or immunodeficiency stroke, myocardial infarction, heart failure, CC immunodeficiency virus (HIV) infection). The nucleic acids are useful CC in a variety of diagnostic applications. The present sequence is a CC cDNA encoding a CARD domain containing protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     10-OCT-2000;

was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi14732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the normalized distal colon library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com) The following repetitive elements were found in this cDNA sequence: 12-210, >LIPB3#LINE/LI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            451 Eckstein Medical Research Building Iowa City, IA 52242, USA Tel: 319 335 8250

polylinker; Site_1: Rot 1; Eco RI; The UI-R-DNI
library is a normalized Rat Distal Colon library (nRDC)
constructed in pT3T7 PAC vector according to the procedure
described by Bonaldo, Lennon & Soares (Normalization and
Subtraction: Two Approaches to Facilitate Gene Discovery.
Genome Research 6: 791-806, 1996). The oligonucleotide
used to prime first strand synthesis contained the
sequence tag GAAGTGCTCC between the Not I cloning site and
DT18 stretch. The Rat Distal Colon tissue was provided by
Tom Freeman of the Sanger Center.
